

## Fractions Menu Task 2:

Build as *few* fractions as possible to satisfy each constraint at least once.

A.	Equivalent to $\frac{1}{4}$	B.	Is closer to 1 than $\frac{1}{2}$
C.	Has a denominator greater than 6	D.	Is less than $\frac{1}{2}$
E.	Is greater than $\frac{3}{4}$	F.	Has a numerator less than 4

*Which constraints pair nicely?  
Which constraints cannot be paired?  
Is it possible to solve in 2, 3, or 4 fractions?*

Describe how and why you built each fraction.  
Be sure to identify which fractions satisfy which constraints.
